

Parent User Manual

Axel Extension

As a parent, you may want to limit your child's viewing experience on the Internet. The Axel Extension provides you with the tools to do just that. In the "Admin Options" page you can set words and websites to be blocked. You can also set websites that are unlockable via points. You can also view the activity log to see websites that were accessed that contain your blocked words.

Admin Mode: Login

The very first time you visit Admin Mode, you will be asked to set a password. Please do so while being mindful of the password requirement of 8-15 characters. In subsequent logins, you will be asked to enter this password that you set.

Admin Mode: Admin Options

This is the page where you can make changes to your child's web surfing experience. See the instructions on the page for more details.

You can get to this page by clicking on the extension, clicking on Admin Mode, logging in, and finally clicking the Admin Options button.

Admin Mode: Add Points

You may give your child points with this option. A child may spend points on unlockable websites. Do note that a child may already earn points by playing the two games provided in Child Mode.
